

Sl. No.	Functionality	Option name	
		Short	long
1	__version__	-V	-version
2	Path to the data directory	-d	-data_dir
3	Number of epochs	-e	-epochs
4	Learning rate	-l	-learning_rate
5	Set seed for random value gen	-s	-seed
6	output directory	-o	-outdir
7	verbosity for code running	-v	-verb
8	batch size for training	-trb	-train_batch_size
9	network architecture type	-a	-architecture
10	half precision	-hp	-half_prec
11	mixed precision	-mp	-mixed_prec

12	data normalization	-dn	-data_norm
13	weight normalization	-w	-weight_norm
14	epoch at which checkpoint.pt written into outdir	-nth_epoch_out	-nth_epoch_out
15	epoch at which pred_mask written into outdir	-nth_mask_out	-nth_mask_out
16	shuffle datasets during training	-tr_shuf	-training_shuffle
17	restart using checkpoint weights	-r	-restart
18	loss function type	-L	-loss_func
19	optimizer type	-O	-optimizer
20	flag to turn on the writing of NIFTI	-W	-write_nifti
21	list of epochs at which pred_mask written into outdir	-mask_oplist	-mask_output_list
22	list of epochs at which checkpoint pt written into outdir	-chpt_oplist	-checkpoint_output_list
23	flag to denote if the pred_masks are written every Nth epoch	-mask_everyn	--mask_everyn
24	flag to denote if the checkpoint.pt is written every Nth epoch	-chpt_everyn	-chpt_everyn
25	flag to denote the availability of the mask during testing	-nm	-no_mask
